

NETPUMP

ENHANCED NETWORK PERFORMANCE

Introduction to Netpump Data

FEBRUARY 2023

**Netpump's Patented
Software Helps Businesses
Get The Maximum
Performance From Their
Network Infrastructure By
Significantly Reducing Data
Transfer Time And Cost**

01 Data Landscape

02 Business Challenges

03 Netpump Overview

04 Working with us

05 Technical Appendix

The volume of data created and consumed continues to grow exponentially

BUSINESS CHALLENGES

The surge in data use is leading to expanding business challenges

Customers, staff and partners are all intolerant of data delivery delays

Cost to serve has increased. The opportunity cost arising from poor network conditions may be even greater

Growing energy consumption from data movement means a bigger carbon footprint

Data acceleration tools are expensive, require skilled labour to operate and rely on cumbersome workflows

Netpump unlocks the potential of any TCP/IP connection with a purely software-based solution

Netpump Data is a transfer protocol with market-leading performance

Operates by encoding data to optimally sized segments to ensure that packets always move at their peak capacity

Works with existing infrastructure and requires no end-user training at all

Data agnostic: Will transfer **any** binary file, including all forms of encrypted data

Compatible with all TCP/IP enabled network and software environments. Improves SD-WAN, IBN and Edge computing.

Can accelerate private cloud workflows without relying on third party servers that may compromise network security

Netpump Data provides a fast, sustainable and secure solution to data transfer that significantly lowers costs

Reduce file transfer time by around 70%* to deliver productivity gains and an enhanced end-user experience

Will significantly lower network infrastructure spend (SD WAN, Gbps line and data acceleration) as **pricing starts at just \$0.02/GB[†]**

Serves sustainability goals by using 50% less energy during data transfer

Invisible to the end user, other than improved network performance, with no changes to existing workflows

* Independent testing by Interactive; [Full report available here.](#)

† Min 50TB annually; Please see full terms and conditions.

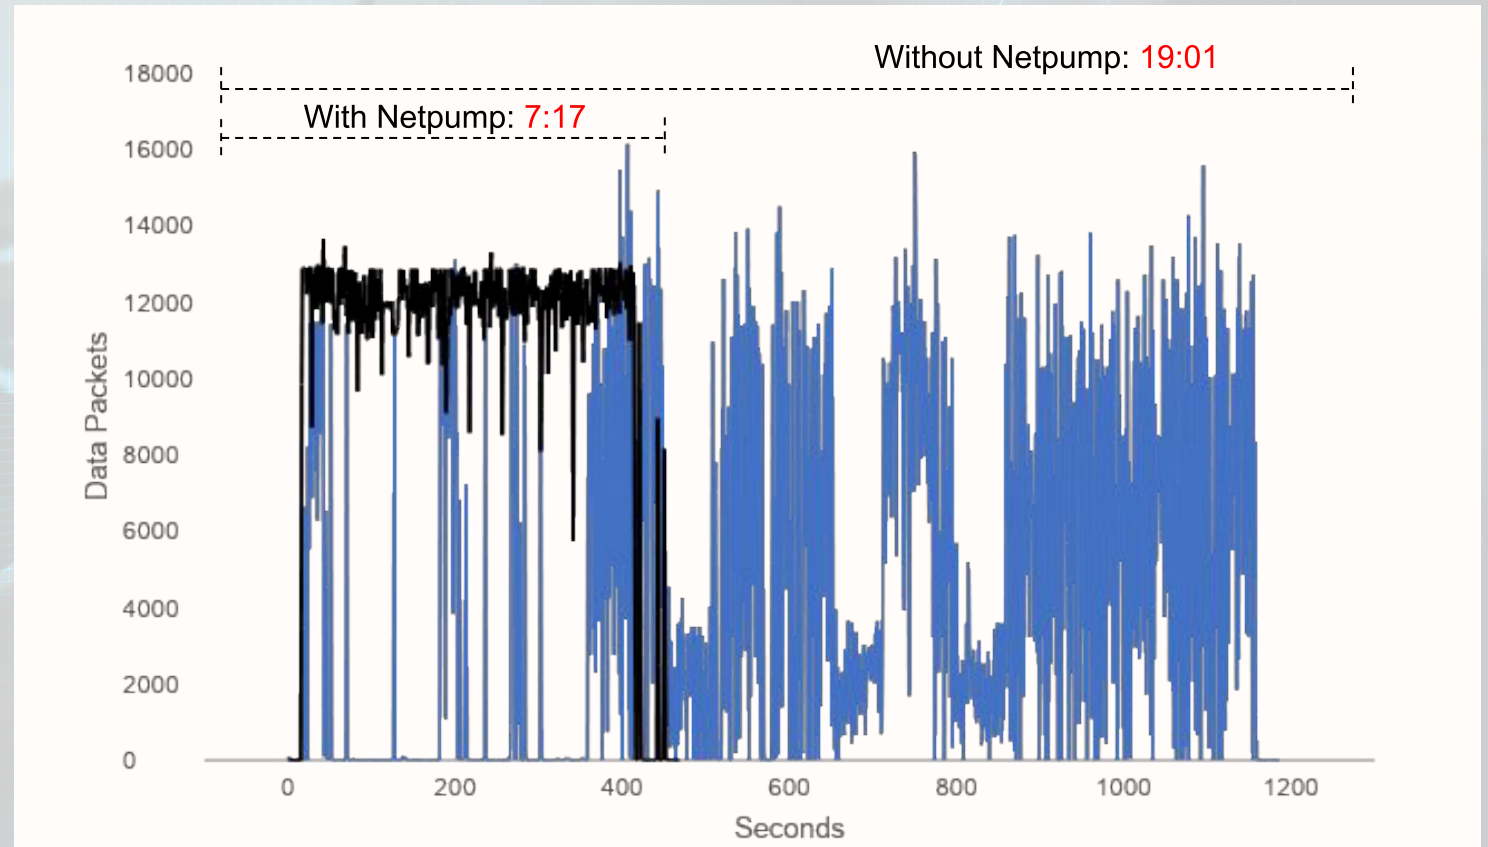

Independent testing shows that Netpump Data reduces data transmission time by around 70%

Interactive performed comprehensive independent testing across several connection types and hosting environments – the full report may be accessed [here](#).

Netpump enabled around 50% more data per second throughput on low latency localized networks and up to 10x accelerated delivery speed on high latency public networks.

Data transferred: 4.39GB
Network Speed: 80 Mbps
Latency: 19ms
Origin: Windows Server 2016 VM
Destination: Windows 8.1 Pro

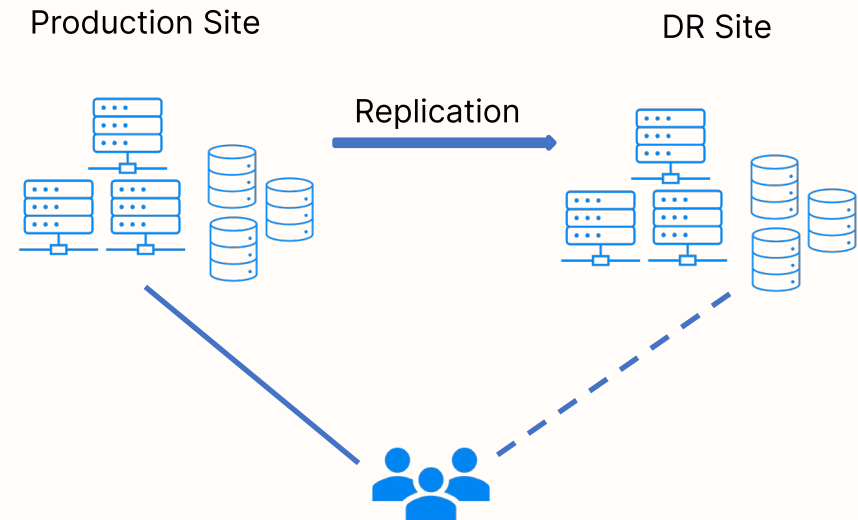

Key Use Case Illustrations: Netpump reduces the time needed for cloud migrations and disaster recovery

Cloud migrations

Speed up cloud transformation projects by moving data from on-premises servers to the cloud more efficiently.

Disaster recovery (DR)

Speed up the replication of data from production to DR site. Netpump is agnostic and is able to transport encrypted and compressed data without any problems

Netpump provides a usage-based software solution to reduce transfer time, operating costs and energy consumption

Working with us is simple

Pricing starts at \$0.02/GB and diminishes with volume. No lock in contracts: Only pay for what you use.

Easy deployment with reliable ongoing support. No need for hardware upgrades or end-user training

24/7 onshore support from dedicated account managers with robust SLA standards provided by Pacbyte and Interactive.

Please contact us to arrange a free demonstration.

***“Netpump has a
over its hardware-based
competitors as operational and
management costs for
hardware-based solutions add
substantially to solution costs.”***

Jason Smith, Enterprise Architect at Interactive

Thank-you for your time.

We look forward to discussing how we can **add value** to your network.

For further technical information, visit:
www.netpump.com/faqs/

Netpump's protocol is much more resilient to packet transfer error

Ordinary TCP/IP uses contiguous transfer and is fragile to packet transfer error

When packets are received with an error over TCP/IP, a request for re-transmission is sent and until an error-free packet is received, transfer time is cut in half to allow re-transmission. This problem gets worse with each successive error.

Netpump encodes data to optimally sized segments to ensure packets always move at peak capacity

Optimised data segmentation and non-contiguous transfer greatly reduces the risk of access congestion, enables accelerated delivery, and accesses the latent capacity of available bandwidth.

See US Patent: [8,510,459](#)

See US Provisional : [16/338990](#)

Netpump Data uses multi-threaded data segment transmission to outperform its peers

Competitors use TCP acceleration or FASP which rely on dedicated servers but they do not improve the underlying error packet retransmission.

Netpump's protocol segments data differently so that error packets that would otherwise be lost are transmitted successfully.

These performance gains do **not** depend on servers and will occur on any TCP connection.

100Mbps Connection speed example

Download speed on a congested line *without* Netpump at 46 Mbps

Download speed on a congested line *with* Netpump is 98 Mbps

Use your existing administration tools to install Netpump (or we can do it for you)

On the **Client Side**, an application is installed to run the Netpump service using a supplied script (e.g., desktops or laptops)

Can be installed and configured using your existing administration tools e.g., Microsoft SCCM, Jamf

Easily incorporated onto your enterprise disk image for automatic provisioning on new machines

Use your existing administration tools to install Netpump (or we can do it for you)

On the **Server Side**, Netpump is installed as a service using a supplied script

Works with your existing server administration tools e.g. Windows Admin Centre

Install Netpump on your gateway server for immediate performance gains prior to deployment to all clients

Compared To Our Peers

NetpumpData

Is Faster, Less Expensive And More Versatile
